BUSINESS PROBLEM STATEMENT

Customer Behaviour Dashboard | Power BI

1. Background

Businesses need to understand what their customers buy and how different customer groups contribute to sales. When this information is spread across reports, it can be difficult to compare product categories, age groups, and subscription status. This Power BI dashboard brings these measures together in one place.

2. Business Problem

> How can the business use customer and sales data to compare product categories, understand differences between age groups, and review customer subscription status to support better business decisions?

3. Main Questions

- How many customers are subscribed and not subscribed?
- Which product categories have higher or lower sales?
- Which product categories contribute the most revenue?
- How do sales and revenue differ across customer age groups?
- Do these results change when the report filters are applied?

4. Dashboard Overview

Visual	Purpose
Customers by subscription status	Shows the split between subscribed and non-subscribed customers.
Sales by product category	Compares sales across categories.
Revenue by product category	Shows how much revenue each category contributes.
Sales by age group	Compares sales across customer age groups.
Revenue by age group	Shows the revenue contribution of each age group.
Report slicers	Let users filter the dashboard and explore selected data.

5. Objectives

- Bring important customer and sales information into one interactive dashboard.
- Compare sales and revenue by category and age group.
- Understand the customer subscription mix.
- Help users spot patterns that may need further investigation.

6. Expected Benefits

The dashboard gives the business a clearer view of customer groups and sales performance. It can help teams decide which categories or customer segments to examine more closely when planning marketing or

customer-engagement activities. The dashboard shows patterns in the data; it does not by itself explain why those patterns occur.

7. Scope and Limitations

This dashboard covers subscription status and sales/revenue by product category and age group, with interactive filters. Topics such as repeat purchases, customer lifetime value, discount impact, customer reviews, seasonal trends, and payment preferences are not confirmed by the visuals identified in the supplied PBIX, so they are outside the scope of this statement.

Final Problem Statement

> The business needs a simple way to understand customer behaviour and compare sales performance. The Customer Behaviour Dashboard uses Power BI to show subscription status and compare sales and revenue across product categories and customer age groups. These insights help users explore customer and category patterns and identify areas for further analysis and better-informed business decisions.

Prepared from the supplied business problem statement and the dashboard visuals identified in the PBIX file.
